

FIXING WHAT IS BROKEN

School was first invented on april 23 of 1635

This was all new to people and nothing was known about teaching other humans how to human in order to live in this world to be able to think for themselves,

But as education grew, so did people's judgment of it, like how women shouldn't go to school and should stay home to cook and clean. That is extremely ignorant and should have never been thought of, and so about three centuries later they finally stopped female descrimintaion and let them go to school and be treated equally..

Things that happen in school affect how we see the future and what we do to it. A lot of students now don't want to go to school. They refuse because it's dreadful days full of tests and scores you try to keep up, all students do now is rush, but when they rush they don't really learn anything but how to cut corners and still get a decent grade. But this isn't how school should be.

School should be a place where people are excited to go and learn new things and the classroom setting shouldn't Look like it's just lecturing and you take notes, it should be interactive and almost breathtaking.

Back when school first started there were a lot of new things happening and they put students in rows of long desk paper and pencil, taught to do as their teacher says. This was teaching them how to work in a factory where they sit in front of long desks and are told what to do, what to say, and maybe get a 20 minute break. But this is not the old days. We are the future and the future is growing along with the earth and that should give us the right to also grow the ways of our school - changing it for the good. No more tests about simple things like writing and math. Although they are important, so is everything else. Being able to think outside the box is more important than just knowing simple math and algebra.

In 2022 we should be learning more than what we have now and we should learn more about creativity and skills to use in the real world. Our schools nowadays don't teach you to solve real world problems unless you take a single class that some students don't even remember.

High school is a place of memories and not just from the fun moments like prom or homecoming but for the days that students had fun learning. They remember having fun moments learning about math or even English, but this is only going to be able to work if we fund more money into school and teachers.

It would give them more to grow and to teach their students in new ways and to make a classroom a comfortable learning environment. We should allow teachers to do with their teaching as they want, teaching their students not just about math but about their experiences and how the math they teached can be used out in the real world.
